Preface

This Final Year Internship Handbook 2025 has been prepared as a comprehensive policy and procedural document to regulate the planning, execution, supervision, and evaluation of Final Year Internship in the Department of Computer Science, Abdul Wali Khan University Mardan. The handbook aims to ensure academic rigor, transparency, fairness, and consistency across all the internship activities.

The handbook is applicable to all students enrolled in the final year of the BS Computer Science program. Upon approval by the Board of Studies (BOS), the policies outlined herein shall be binding for the academic year 2025.

Acknowledgements

The Department of Computer Science gratefully acknowledges the valuable contributions of its faculty members, the Departmental Final Year Project (FYP) Committee, the Quality Enhancement Cell, and the academic leadership of **Abdul Wali Khan University Mardan**.

Special appreciation is extended to **Dr. Aftab Ahmed Khan, FYP Coordinator**, for his coordination and oversight in the development of this handbook, and to **Prof. Nadeem Iqbal, Chairman, Department of Computer Science**, for his guidance, support, and leadership. Their commitment to academic excellence has played a vital role in ensuring the quality and consistency of this handbook.

1. Introduction

The internship program is a compulsory academic requirement for students enrolled in the BS Computer Science program at Abdul Wali Khan University Mardan. It provides practical exposure to real-world computing environments and professional practices. The internship is undertaken during the summer break after completion of the 6th semester.

2. Objectives of the Internship Program

The internship program is designed to serve as a structured learning experience that bridges the gap between academic knowledge and professional practice in the field of Computer Science. One of the primary objectives of the internship is to enable students to apply theoretical concepts learned during coursework to real-world computing problems, thereby strengthening their practical understanding and technical competence.

The program aims to enhance students' technical skills by providing exposure to modern tools, technologies, development environments, and professional workflows commonly used in the IT industry. Through hands-on experience, students develop proficiency in areas such as software development, system analysis, problem-solving, debugging, documentation, and the use of industry-standard platforms and frameworks.

Another key objective of the internship program is to develop essential professional and soft skills, including communication, teamwork, time management, ethical conduct, and adaptability in a professional environment. Interaction with industry professionals and peers helps students understand workplace expectations, professional behavior, and organizational culture.

The internship also encourages industry engagement and professional networking, allowing students to build connections with professionals, organizations, and potential employers. These interactions provide insight into current industry trends, career pathways, and employment opportunities in the computing sector.

Finally, the internship program prepares students for future career opportunities or advanced studies by fostering independent learning, critical thinking, and continuous skill development. By completing the internship, students gain confidence, professional exposure, and practical experience that enhance their employability and readiness for the evolving demands of the Computer Science profession.

3. Eligibility Criteria

Students who have successfully completed **six (6) semesters** of the BS Computer Science program are eligible to undertake the internship. Eligibility is contingent upon the student being **officially registered with the Department of Computer Science** for the internship as per the notified schedule. Students must have cleared all required courses up to the sixth semester and should not have any major academic or disciplinary issues at the time of registration. The Department reserves the right to verify academic standing before approving internship registration. Students who fail to meet eligibility requirements may be deferred to a later internship cycle. Only students fulfilling all eligibility conditions shall be permitted to proceed with any of the approved internship options.

4. Duration and Timing

The internship shall be completed during the **summer break immediately following the successful completion of the sixth (6th) semester** of the BS Computer Science program. The timing of the internship is structured to ensure that students can fully engage in professional or skill-development activities without conflict with regular academic coursework. The **overall duration of the internship varies depending on the selected internship option**, as defined by departmental guidelines. Students opting for an industrial internship are required to complete the minimum prescribed duration, while those choosing departmental online sessions or certified online courses must fulfill the respective attendance and completion requirements. All internship activities must be completed within the officially notified internship period. Any extension or deviation from the approved schedule requires prior written approval from the Department of Computer Science.

5. Approved Internship Options

Option A: Industrial Internship

Students may undertake a **minimum six (6) months industrial internship** in recognized software houses, IT companies, technology startups, research organizations, or public and private sector IT departments across Pakistan. The primary objective of this option is to provide students with hands-on experience in a professional computing environment where they can apply theoretical knowledge to real-world problems.

The internship organization must offer work relevant to the discipline of Computer Science, such as software development, system design, database management, networking, cybersecurity, data analysis, artificial intelligence, or related IT services.

Students are expected to actively participate in assigned tasks, projects, or development activities under the supervision of a designated industry mentor.

Prior approval of the internship organization and scope of work is mandatory and must be obtained from the Department of Computer Science before commencement of the internship. Any change in organization or internship scope during the internship period requires written approval from the Department.

Upon completion of the internship, students must submit an **official internship completion certificate** issued by the host organization, clearly stating the duration, nature of work, and performance of the student. Additional documentation such as progress reports, logbooks, or supervisor evaluations may be required as notified by the Department. Failure to complete the internship or submit required documentation may result in non-acceptance of the internship.

Option B: Departmental Online Internship Sessions

Students may opt to fulfill their internship requirement by attending **departmentally organized online internship sessions** conducted by the Department of Computer Science. This option is designed to provide structured industry exposure, practical learning, and professional insight for students who may not be able to undertake a physical industrial internship.

The online internship program shall consist of **one session per week**, with each session having a duration of **two to three (2–3) hours**. These sessions will be delivered by **industry professionals, experienced practitioners, and domain experts** from various fields of Computer Science and Information Technology.

The sessions will focus on practical and industry-oriented topics such as software development practices, emerging technologies, real-world case studies, tool demonstrations, professional workflows, and career guidance. Interactive activities, hands-on exercises, discussions, and question-and-answer sessions may form part of the program to enhance student engagement and learning outcomes.

Attendance and active participation in all scheduled sessions are mandatory. Students are required to maintain attendance records and complete any assigned tasks, reflections, or assessments as directed by the Department. Failure to meet attendance or participation requirements may result in non-acceptance of this internship option.

Upon successful completion of the online internship sessions, students shall be awarded a **certificate of participation or completion** issued by the Department of Computer Science. This option shall be considered equivalent to an industrial internship for academic purposes, subject to fulfillment of all departmental requirements.

Option C: Online Professional Courses

Students may fulfill the internship requirement by completing **at least eight (8) certified online professional courses** from recognized and reputable learning platforms such as **Coursera** or **Udemy**. This option is designed to promote self-directed learning and skill enhancement in specialized areas of Computer Science and Information Technology.

The selected courses must be **relevant to the discipline of Computer Science** and should contribute meaningfully to the student's technical and professional development. Courses may cover areas such as programming, software engineering, data science, artificial intelligence, cybersecurity, cloud computing, web or mobile application development, or other emerging computing technologies. Repetition of similar content across multiple courses should be avoided to ensure breadth and depth of learning.

All completed courses must result in **verifiable certificates of completion**, clearly displaying the student's name, course title, platform name, and completion date. Students are required to submit these certificates to the Department as part of the internship documentation. The Department reserves the right to review, accept, or reject any course that does not meet academic or professional relevance standards.

Completion of this option is subject to prior approval by the Department of Computer Science. Failure to complete the required number of courses or submit valid documentation may result in non-acceptance of the internship.

6. Registration and Approval Process

All students are required to formally **register their selected internship option with the Department of Computer Science** within the timeframe notified by the Department. Registration is mandatory for all internship options and must be completed before the commencement of the internship activities. Students must submit the required registration form along with supporting documents, if applicable.

Prior approval is compulsory for students opting for **industrial internships** and **online professional course-based internships**. For industrial internships, students must provide details of the host organization, nature of work, duration, and supervisor information for departmental approval. For online course-based internships, students must submit a list of proposed courses for review to ensure relevance and academic suitability.

Any change in internship option, organization, or course selection after approval must be communicated in writing and approved by the Department. Failure to register, obtain approval, or adhere to the approved internship plan may result in

non-acceptance of the internship. The Department reserves the right to approve, reject, or modify internship registrations in accordance with academic and administrative requirements.

7. Student Responsibilities

Students undertaking the internship are required to maintain a high standard of **professional conduct, discipline, and ethical behavior** throughout the internship period, regardless of the selected internship option. They must actively participate in all assigned activities, tasks, sessions, or coursework and demonstrate commitment, punctuality, and responsibility in fulfilling internship requirements.

Students are responsible for complying with the rules, policies, and expectations of the host organization, the Department of Computer Science, and the University. This includes respecting workplace ethics, maintaining confidentiality of organizational data, and adhering to professional communication standards. For departmental online sessions, students must ensure regular attendance and active participation, while for online courses, timely completion of coursework and assessments is mandatory.

Students must also maintain accurate records of their internship activities, including attendance logs, progress summaries, and certificates where applicable. All required documentation—such as internship completion certificates, attendance records, course certificates, or reports—must be submitted **within the notified deadlines**. Failure to meet responsibilities, submit complete documentation, or adhere to approved internship guidelines may result in non-acceptance or repetition of the internship.

8. Departmental Responsibilities

The Department of Computer Science shall be responsible for the overall coordination, supervision, and administration of the internship program in accordance with approved academic policies. The Department shall organize and notify internship activities, schedules, and deadlines in a timely manner to ensure smooth implementation of the internship program.

The Department is responsible for reviewing and approving internship registrations, including industrial internships and online course-based internships, to ensure relevance to the discipline of Computer Science. It shall also organize and manage departmental online internship sessions, including coordination with industry experts, scheduling of sessions, and monitoring student participation.

Verification of internship-related documentation is a key responsibility of the Department. This includes validation of internship completion certificates, attendance records, course certificates, and any other required documents submitted by students. The Department shall maintain official records of internship participation, completion status, and documentation for academic and administrative purposes.

In addition, the Department shall address internship-related academic issues, queries, and grievances raised by students in a fair and timely manner. The Department reserves the right to take corrective actions, recommend repetition, or impose conditions in cases of non-compliance, in accordance with university regulations.

9. Documentation and Submission Requirements

Students are required to submit all **internship-related documentation** to the Department of Computer Science within the deadlines notified by the Department. The type of documentation to be submitted depends on the selected internship option and must be complete, accurate, and verifiable.

Students opting for an **industrial internship** must submit an official internship completion certificate issued by the host organization. The certificate should clearly mention the name of the organization, duration of the internship, nature of work performed, and confirmation of satisfactory completion. Additional documents such as progress reports, logbooks, or supervisor evaluations may be required as specified by the Department.

Students participating in **departmental online internship sessions** must submit attendance records and any assigned tasks, reflections, or assessments as instructed. Regular attendance and documented participation are mandatory for acceptance of this option.

Students selecting the **online professional courses option** must submit verifiable certificates of completion for all approved courses. Certificates must clearly display the student's name, course title, platform name, and completion date. Screenshots or unverifiable documents may not be accepted.

Failure to submit complete and authentic documentation within the prescribed timeline may result in **non-acceptance of the internship** or requirement to repeat the internship. The Department reserves the right to verify submitted documents and reject any submission that does not meet academic or administrative requirements.

10. Evaluation and Completion

The internship shall be evaluated on a **Pass/Fail basis** in accordance with departmental guidelines. Successful completion requires fulfillment of the approved internship option, submission of complete and verified documentation, and compliance with all academic and professional requirements. Students who fail to meet attendance, participation, or documentation standards may be declared unsuccessful. In such cases, the student may be required to **repeat the internship** as per departmental and university regulations. The decision of the Department regarding internship evaluation shall be final.

11. Ethical and Professional Conduct

Students undertaking the internship are required to uphold the highest standards of **professional ethics and integrity** throughout the internship period. This includes maintaining confidentiality of organizational data, respecting intellectual property, and adhering to workplace policies and codes of conduct. Academic honesty must be observed in all reports, submissions, and certifications related to the internship. Students are expected to demonstrate respectful behavior and professionalism in all interactions with supervisors, peers, and organizational staff. Any violation of ethical or professional standards may result in disciplinary action as per university regulations.

12. Grievance and Clarification

Students may approach the **Project Coordinator** or the **Departmental Committee** for clarification or resolution of any issues related to the internship program. Grievances may relate to registration, approval, evaluation, documentation, or conduct during the internship period. Students are encouraged to seek resolution through proper academic channels in a timely and professional manner. All grievances shall be reviewed fairly and confidentially in accordance with departmental and university regulations. The decision of the Departmental Committee shall be considered final.

13. Authority and Amendments

The Department of Computer Science reserves the right to interpret, implement, and amend the provisions of this internship handbook in accordance with academic and administrative requirements. Any amendments shall be made with the approval of the relevant academic bodies of Abdul Wali Khan University Mardan. Such amendments shall be communicated to students through official departmental

notifications. In case of any ambiguity or dispute, the interpretation of the Department shall prevail. The decisions taken under this authority shall be final and binding.
